

Continuing a Great Tradition:

Sayreville School District and Springboard

Springboard:

Customizes programs to support each school's mission and vision and the community.

Collaborates with each school to reinforce academic and behavioral objectives.

Uses fun and engaging activities to nurture self-esteem and growth.

Employs certified teachers to ensure we realize these goals.

Customized Partnership Drives Academic Achievement

Springboard partnered with the Sayreville school district in New Jersey in August 2016 to provide extended care at their seven elementary and middle schools. To date, there are over 100 Sayreville district students, ranging from Pre-K to eighth grade, enrolled in a Springboard program. Springboard's certified teachers guide children's homework completion and comprehension. With a focus on experiential learning of academic skills, Springboard utilizes research-based programming to reinforce classroom learning with compelling activities that also target social and emotional development, physical well-being, and teamwork. Springboard further supports students, families, and schools by hiring educators who are dedicated members of the local community.

At the annual Lights on Afterschool celebration, a national event that showcases the great opportunities that out-of-school-time programming provides, children in the Sayreville district were able to explore their creative sides by writing poetry and making crafts. Springboard partnered with the schools, teacher, parents, and the local community to make this event a success.
